Managing roles in Fuse

A role is a position or status in an organization with a prescribed or expected behavior associated.

Fuse works on role-based ownership and only a user with admin access can create or modify roles. The information a user has access to is determined by the permissions allocated to the user's assigned role(s).

Types of roles in Fuse:

Administration role:

Content management role

Assign the content manager role to the user who is responsible for organizing content for end users. In the portal, this user can launch the Content Management.

Execution role

Allows you to trigger Execution entities and request execution actions.

To manage roles in Fuse, follow these steps:

- Login to Fuse using your admin credentials.
- You will be redirected to the Fuse home page. Click on the “My Profile” icon.
- Click on the “Settings” option. A side sheet will open.
- Click on the “roles and permissions” option. A side sheet will open.

Creating new role:

To create a new role in Fuse, follow these steps:

- Click on the “New Role” option. A side sheet will open.
- Enter the role name and details.
- Check the boxes to assign permissions to your role. Admins can assign administrator role, content management role or execution role.
- Once done, click on the “Save” option to save the role.

The newly created role will be visible under the roles and permissions tab.

Modifying roles:

Administrators can edit or delete an existing role in Fuse.

To edit the role:

- Click on the ellipsis icon against the role you want to edit
- You can edit role names and details, add, delete to remove permission for the assigned roles.
- Once done, click on the “Save” option to save the changes.

To delete the role:

- Click on the ellipsis icon against the role you want to delete
- Click on the delete option and click on the confirm to delete the existing role.
