

Missing Rule

Missing Rule is used to identify what all values from dataset are missing from a certain field. Once the missing rule is configured on a field, it will check whether the field has values maintained in it or not.

To configure missing rule, follow these steps:

- Login to Fuse using your admin credentials.
- Go to the data tab.
- Select the dataset from the side menu for which the missing rule needs to be configured.
- Click on the “Forms and Rules” option. A side-sheet will open.
- Click on the “business rules” option.
- Click on the new business rule option.
- Select missing rule as the rule type.
- Enter the rule category from the dropdown
- Enter the rule name or description
- Enter the field. Users can enter one or multiple fields as per their requirement.
- Once done, click on the save option to save the rule.
- Enter the error message to display when the rule is not met

The newly created missing rule will be available in the business rules section.
